

... manual roller conveyors in different lengths & widths

Picture shows optional accessory „metal filler plates“

Our roller conveyor series RB offers the simplest solution for a manual and stable material supply station for sawing or punching centers.

The different versions of our RB roller conveyors can all be height adjusted, are available in different widths and lengths and can either be supplied with standard plastic or optional steel rolls.

Further options include metal filler sheets between the rolls, fixed and movable stops and vertical rolls
